

*TILLÆA VIRIDIS*. Stems numerous, much branched, spreading, about 2 inches long: leaves narrowly linear, acute: flowers solitary in the axils, very shortly pedicellate, minute; sepals broad and rounded; petals twice longer, equalling the carpels, obtuse: follicles green, obtuse, 8-seeded, less than half a line long. — Wet places, base of the Sierra Madre, Chihuahua; C. G. Pringle (n. 1561), Oct., 1887.
